Types of factor analysis. Exploratory factor analysis (EFA) is used to identify complex interrelationships among items and group items that are part of unified concepts. The researcher makes no a priori assumptions about relationships among factors.. Confirmatory factor analysis (CFA) is a more complex approach that tests the hypothesis that the items are associated with specific factors.

Results. The principal component analysis confirmed the presence of a two-component factor structure in the English version and a three-component factor structure in the French version with eigenvalues > 1 . The English version of the ISI had an excellent internal consistency ($\hat{\alpha} = 0.90$), while the French version had a good internal consistency ($\hat{\alpha} = 0.70$).

Reliable structures, very precise drawings. CYPECAD was brought about to carry out the analysis and design of reinforced concrete and steel structures, subject to horizontal and vertical forces, for houses, buildings and civil work projects.. Its use guarantees maximum analysis reliability and the best drawing design, including the following elements:
