Perovskite solar cells have experienced a rapid development since the first report in 2012 with the power conversion efficiency approaching the theoretical limit. Device stability is still one of the remaining challenges for commercialisation. In this Review, the authors address the important role the charge selective contacts play in the long-term stability of perovskite solar cells.

Atomic layer deposition (ALD) is a vapor phase technique capable of producing thin films of a variety of materials. Based on sequential, self-limiting reactions, ALD offers exceptional conformality on high-aspect ratio structures, thickness control at the Angstrom level, and tunable film composition.

Solar panels are gaining importance as a major alternate source of energy in the prevailing condition of depleting non renewable energy sources. Photovoltaic (PV) modules are being increasingly used in large as well as small scale installations. The performance of PV panels is affected by the shading effect due to trees,

passing of clouds, neighboring buildings and any other means.

Bloom Energy Servers stack small fuel cells to operate in concert. Bloom Energy's approach of assembling fuel-cell stacks that enables individual plates to expand and contract at the same rate at high temperatures. However, other solid oxide fuel cell producers have solved the problem of different expansion rates of cells in the past. Scott Samuelsen of the University of California, Irvine ...

A fuel cell is an electrochemical cell that converts the potential energy from a fuel into electricity through an electrochemical reaction of hydrogen fuel with oxygen or another oxidizing agent. Fuel cells are different from batteries in requiring a continuous source of fuel and oxygen (usually from air) to sustain the chemical reaction, whereas in a battery the chemical energy comes from ...

In article number 1801153, Yan-Qing Li, Jian-Xin Tang and co-workers demonstrate a facile route to achieving indium-free flexible perovskite solar cells with high efficiency and superior repeated bendability. The performance enhancement benefits from the synergetic interplay of a composite electrode stack, consisting of an electrically conductive silver nanowires network, a sol-gel-derived ZnO ...
