

### **gene and protein evolution pdf**

In biology, a gene is a sequence of nucleotides in DNA or RNA that codes for a molecule that has a function in a living organism. During gene expression, the DNA is first copied into RNA. The RNA can be directly functional or be the intermediate template for a protein that performs a function. The transmission of genes to an organism's offspring is the basis of the inheritance of phenotypic trait.

The gene-centered view of evolution is a model for the evolution of social characteristics such as selfishness and altruism.. Acquired characteristics. The formulation of the central dogma of molecular biology was summarized by Maynard Smith: . If the central dogma is true, and if it is also true that nucleic acids are the only means whereby information is transmitted between generations, this ...
