Parallel Algorithms for Irregularly Structured Problems

The subject of this chapter is the design and analysis of parallel algorithms. Most of today's algorithms are sequential, that is, they specify a sequence of steps in which each step consists of a single operation. These algorithms are well suited to today's computers, which basically perform operations in a sequential fashion.

Parallel Algorithms - Carnegie Mellon School of Computer

computer and the special kind of algorithms called parallel algorithms are designed for these computers. The

parallel algorithms depend on the kind of parallel computer they are designed for. Hence, for a given problem, there would be a need to design the different kinds of parallel algorithms depending upon the kind of parallel architecture.
