In science In physics. Phase (waves), the position of a point in time (an instant) on a waveform cycle Phase (matter), a physically distinctive form of a substance, such as the solid, liquid, and gaseous states of ordinary matter"also referred to as a "macroscopic state" Phase transition, the transformation of a thermodynamic system from one phase to another

The phase velocity of a wave is the rate at which the phase of the wave propagates in space. This is the velocity at which the phase of any one frequency component of the wave travels. For such a component, any given phase of the wave (for example, the crest) will appear to travel at the phase velocity. The phase velocity is given in terms of the wavelength  $\lambda$  (lambda) and time period T as
