Definition. All living things were traditionally placed into one of two groups, plants and animals. This classification may date from Aristotle (384 BC – 322 BC), who made the distinction between plants, which generally do not move, and animals, which often are mobile to catch their food. Much later, when Linnaeus (1707–1778) created the basis of the modern system of scientific ...

The Algorithmic Beauty of Plants was originally printed by Springer-Verlag in 1990 (second printing 1996). (See our list of known errors from the print version.) An electronic version has been produced using the original LaTeX files and digital illustrations. It is available in two versions: the original version is of higher quality, while the downsampled version is of low quality, but has a ...

Algorithmic Botany: Publications

Herbaceous plants (in botanical use frequently simply herbs) are plants that have no persistent woody stem above ground. The term is mainly applied to perennials, but in botany it may also refer to annuals or biennials, and include both forbs and graminoids. [citation needed] Annual herbaceous plants die completely at the end of the growing season or when they have flowered and fruited, and ...
