EMF-Med World Conference on Biomedical Applications of Electromagnetic Fields aims to contribute to development and optimization of innovative EMF-based medical devices and procedures, which will be safer, more efficient and less invasive. The conference is organized to promote systematical research and development of EMF-Med topics: beneficial biomedical interactions and applications of ...

Wireless power transfer (WPT), wireless power transmission, wireless energy transmission (WET), or electromagnetic power transfer is the transmission of electrical energy without wires as a physical link. In a wireless power transmission system, a transmitter device, driven by electric power from a power source, generates a time-varying electromagnetic field, which transmits power across space ...

Heparin is a naturally occurring linear polysaccharide that shares chemical and structural similarity to heparan sulfate, a cell surface proteoglycan that provides the natural anticoagulant surface activity of the vascular endothelium. Unlike heparan sulfate, heparin is largely intracellular, within the granules of mast cells.

Heparin coatings for improving blood compatibility of

Nanotechnology ("nanotech") is manipulation of matter on an atomic, molecular, and supramolecular scale. The earliest, widespread description of nanotechnology referred to the particular technological goal of precisely manipulating atoms and molecules for fabrication of macroscale products, also now referred to as molecular nanotechnology. A more generalized description of nanotechnology was ...

This 1,512 LED unit of 660 nm and 850 nm was used by someone for a relative who has a case of Alzheimer's. I believe the setting was adjusted to about 150 W and I believe they both used it consistently for 15 minutes twice a day.

The rise of small-scale, portable electronics and wearable devices has boosted the desire for ways to harvest energy from mechanical motion. Such approaches could be used to provide battery-free power with a small footprint. Kim et al. present an energy harvester made from carbon nanotube yarn that converts mechanical energy into electrical energy from both torsional and tensile motion.

Harvesting electrical energy from carbon nanotube yarn

In general, polymers with a R_2SiO unit are termed silicones, while the SiO repeat unit is also called siloxane. The strength of the SiO bond gives the polymer its thermal and chemical stability, which is important for its use in high-temperature applications [1,2]. In PDMS, the flexibility of the siloxane backbone permits the chains to easily arrange and rearrange themselves so as to place ...
