### **radiodiffusion radio fm recepteur pdf**

La radio FM, inventée en 1933 par Edwin Armstrong, est un procédé de radiodiffusion de programmes radiophoniques en modulation de fréquence (ou FM pour Frequency modulation) dans la gamme des très hautes fréquences (VHF). Elle est destinée à être reçue directement par le public et s'applique à la fois à la réception individuelle et à la réception communautaire [1].

### **Radio FM – Wikipédia**

La radiodiffusion définit la transmission des sons : la voix humaine et les signaux audio par les ondes. Dans un émetteur radiophonique, les sons sont transformés en signaux électriques basse fréquence (signaux de modulation), ils sont superposés à une onde à haute fréquence (onde porteuse) et, envoyés dans une antenne qui les transforme en ondes électromagnétiques.

Cette radio n'est pas la L6X38T de Philips, mais le modèle le plus récent modifié 2RL798. Les deux schémas sont légèrement différents, les boutons des commandes sont aussi un peu différents, voici les différences que j'ai notées, il y en a peut-être d'autres :
